

Amendments To The Specification

Please replace the paragraph on page 8, lines 30-35 of the specification with the following amended paragraph:

As described above, the present invention can reduce a signal-to-noise ratio (SNR) satisfying a Threshold of Visibility (TOV) by mixing robust data coded in P-2VSB, **[[E-VSB]] E-8VSB**, and/or E-8VSB methods with normal data following the 8-VSB method and thus improving reception performance with respect to normal data as well as robust data.
